

# PATIENT SCREENING REPORT

Retinal Edge Triage — Explainable AI-Assisted Diabetic Retinopathy Screening for Rural Healthcare  
Screening Date & Time: 11-Sep-2026 18:58 UTC | Reference ID: SCR-2026-000184

|                               |                            |                                            |
|-------------------------------|----------------------------|--------------------------------------------|
| Patient ID: PAT-DR-0189       | Full Name: Ramesh Gowda    | Age / Gender: 58 / Male                    |
| Screening ID: SCR-2026-000184 | Location: Mysuru Rural PHC | Diabetes Type / Duration: Type 2 (8 years) |

## 1. Retinal Image Acquisition & Quality Gate

|                          |                                      |                          |                                   |
|--------------------------|--------------------------------------|--------------------------|-----------------------------------|
| Eye Evaluated: Right Eye | Image Source: Portable Fundus Camera | Quality Score: 60.1%     | Quality Status: <b>BORDERLINE</b> |
| Focus / Blur: 25.9%      | Illumination: 35.3%                  | Vessel Visibility: 63.4% | Field of View: 91.5%              |

## 2. Diabetic Retinopathy Screening & Detection Result

|                      |                                                                                                           |                      |                                                                                           |
|----------------------|-----------------------------------------------------------------------------------------------------------|----------------------|-------------------------------------------------------------------------------------------|
| Screened Eye:        | Right Eye                                                                                                 | DR Grade & Severity: | Grade: 2 — Moderate NPDR                                                                  |
| Model Confidence:    | 94.9%                                                                                                     | DME Risk Status:     | Possible DME detected                                                                     |
| Class Probabilities: | DR 0: 0.8%   DR 1: 1.9%   DR 2: 94.9%   DR 3: 1.1%   DR 4: 1.3%                                           | DR Status:           | <b>Diabetic Retinopathy: DETECTED</b>                                                     |
| Result Explanation:  | Moderate non-proliferative changes with microaneurysms (15) and exudates (9). Secondary review indicated. | Recommended Action:  | <b>Ophthalmology evaluation recommended within 3 months for stereoscopic examination.</b> |

## 3. Previous vs Current Screening Comparison

This is the patient's first recorded screening. No previous result is available for comparison.

## 4. Human-in-the-Loop Ophthalmologist Adjudication

|                       |                                                     |                         |                                                |
|-----------------------|-----------------------------------------------------|-------------------------|------------------------------------------------|
| Doctor Decision:      | ACCEPTED                                            | Reviewing Doctor:       | Dr. Rajesh Varma, MS                           |
| Final Grade Assigned: | Grade 2                                             | Override Justification: | None                                           |
| Clinical Notes:       | Retinal signs compatible with diabetic retinopathy. | HCW Instructions:       | Issue referral and schedule patient transport. |

## 5. Risk Triage & Clinical Disposition

|                         |                                       |                     |          |
|-------------------------|---------------------------------------|---------------------|----------|
| Risk Category:          | HIGH RISK                             | Referral Priority:  | URGENT   |
| Referral Reference ID:  | REF-2026-00042                        | Follow-up Schedule: | 3 Months |
| Clinical Justification: | Moderate DR with DME risk identified. | Referral Status:    | PENDING  |

6. Recommended Eye-Care Facility (Referral Destination)

|                         |                                                                            |                          |                                           |
|-------------------------|----------------------------------------------------------------------------|--------------------------|-------------------------------------------|
| Hospital / Clinic Name: | Narayana Nethralaya Vitreoretinal Institute                                | Distance:                | 2.1 km away                               |
| Hospital Address:       | Main Road, Area Sector 1                                                   | Contact Number:          | +91 80 6612 1400                          |
| Reason for Referral:    | Moderate NPDR requires ophthalmic evaluation based on AI screening result. | Navigation / Directions: | <a href="#">View Map &amp; Directions</a> |

7. Patient Care & Lifestyle Guidance

**Guidance:** Moderate diabetic retinal changes were detected. An eye specialist should review the screening result.

- Take prescribed diabetes medicines regularly.
- Monitor blood glucose as advised by your healthcare provider.
- Follow a balanced diet rich in vegetables and whole grains.
- Stay physically active as advised by your healthcare provider.
- Avoid smoking and tobacco products.
- Attend recommended comprehensive eye check-ups.
- Do not stop prescribed medicines without consulting your doctor.

***NOTICE:** Patient care and lifestyle guidance support general wellness and glycemic control, but do not cure or reverse diabetic retinopathy (DR 1–4) and cannot replace examination by an eye specialist.*

***STATUTORY CLINICAL NOTICE:** This referral recommendation is based on the screening assessment. Final clinical management should be determined by a qualified healthcare professional. AI predictions DO NOT constitute a definitive medical diagnosis. Final clinical interpretation and management must always be performed by a qualified ophthalmologist.*
