

# PATIENT SCREENING REPORT

Retinal Edge Triage — Explainable AI-Assisted Diabetic Retinopathy Screening for Rural Healthcare  
Screening Date & Time: 12-Sep-2026 01:58 UTC | Reference ID: SCR-2026-000229

|                               |                                   |                                            |
|-------------------------------|-----------------------------------|--------------------------------------------|
| Patient ID: PAT-DR-0233       | Full Name: Test Screening Patient | Age / Gender: 52 / Female                  |
| Screening ID: SCR-2026-000229 | Location: Test Rural PHC          | Diabetes Type / Duration: Type 2 (6 years) |

## 1. Retinal Image Acquisition & Quality Gate

|                          |                             |                          |                      |
|--------------------------|-----------------------------|--------------------------|----------------------|
| Eye Evaluated: Right Eye | Image Source: Fundus Camera | Quality Score: 75.3%     | Quality Status: GOOD |
| Focus / Blur: 86.2%      | Illumination: 35.8%         | Vessel Visibility: 63.1% | Field of View: 91.5% |

## 2. Diabetic Retinopathy Screening & Detection Result

|                      |                                                                                                          |                      |                                                                                    |
|----------------------|----------------------------------------------------------------------------------------------------------|----------------------|------------------------------------------------------------------------------------|
| Screened Eye:        | Right Eye                                                                                                | DR Grade & Severity: | Grade: 2 — Moderate DR                                                             |
| Model Confidence:    | 94.0%                                                                                                    | DME Risk Status:     | Possible DME detected                                                              |
| Class Probabilities: | Primary Class Probability: 94.0%                                                                         | DR Status:           | Diabetic Retinopathy: DETECTED                                                     |
| Result Explanation:  | Moderate non-proliferative changes with microaneurysms (8) and exudates (5). Secondary review indicated. | Recommended Action:  | Ophthalmology evaluation recommended within 3 months for stereoscopic examination. |

## 3. Previous vs Current Screening Comparison

This is the patient's first recorded screening. No previous result is available for comparison.

## 4. Human-in-the-Loop Ophthalmologist Adjudication

|                       |                                                               |                         |                                |
|-----------------------|---------------------------------------------------------------|-------------------------|--------------------------------|
| Doctor Decision:      | ACCEPTED                                                      | Reviewing Doctor:       | Dr. Rajesh Varma, MS (Ophthal) |
| Final Grade Assigned: | Grade 2                                                       | Override Justification: | None                           |
| Clinical Notes:       | Looks consistent with moderate non-proliferative retinopathy. | HCW Instructions:       | None                           |

## 5. Risk Triage & Clinical Disposition

|                        |                |                     |          |
|------------------------|----------------|---------------------|----------|
| Risk Category:         | MEDIUM RISK    | Referral Priority:  | URGENT   |
| Referral Reference ID: | REF-2026-00124 | Follow-up Schedule: | 6 Months |

|                         |                                                     |                  |         |
|-------------------------|-----------------------------------------------------|------------------|---------|
| Clinical Justification: | Assigned MEDIUM risk tier based on clinical triage. | Referral Status: | PENDING |
|-------------------------|-----------------------------------------------------|------------------|---------|

6. Recommended Eye-Care Facility (Referral Destination)

|                         |                                                                          |                          |                                           |
|-------------------------|--------------------------------------------------------------------------|--------------------------|-------------------------------------------|
| Hospital / Clinic Name: | ABC Eye Hospital                                                         | Distance:                | 2.4 km away                               |
| Hospital Address:       | Sayyaji Rao Road, Medar Block, Yadavagiri, Mysuru, Karnataka 570020      | Contact Number:          | +91 821 241 9000                          |
| Reason for Referral:    | Moderate DR requires ophthalmic evaluation based on AI screening result. | Navigation / Directions: | <a href="#">View Map &amp; Directions</a> |

7. Patient Care & Lifestyle Guidance

**Guidance:** Moderate diabetic retinal changes were detected. An eye specialist should review the screening result.

- Take prescribed diabetes medicines regularly.
- Monitor blood glucose as advised by your healthcare provider.
- Follow a balanced diet rich in vegetables and whole grains.
- Stay physically active as advised by your healthcare provider.
- Avoid smoking and tobacco products.
- Attend recommended comprehensive eye check-ups.
- Do not stop prescribed medicines without consulting your doctor.

**NOTICE:** Patient care and lifestyle guidance support general wellness and glycemic control, but do not cure or reverse diabetic retinopathy (DR 1–4) and cannot replace examination by an eye specialist.

**STATUTORY CLINICAL NOTICE:** This referral recommendation is based on the screening assessment. Final clinical management should be determined by a qualified healthcare professional. AI predictions DO NOT constitute a definitive medical diagnosis. Final clinical interpretation and management must always be performed by a qualified ophthalmologist.
